WHAT IS THE PROPOSED PROJECT?

NRCS Watershed Protection & Flood Prevention Program

The Natural Resources Conservation Service's (NRCS) Watershed Protection and Flood Prevention Program helps units of federal, state, local and tribal governments protect and restore watersheds. The program provides financial and technical assistance for erosion and sediment control, watershed protection, flood prevention, water quality improvement, water management, fish and wildlife enhancement, recreation and hydropower.

North Ogden Watershed Plan Project

The Weber Box Elder Conservation District and North Ogden City have received funding from the NRCS's Watershed Protection and Flood Prevention Program to complete an Environmental Assessment (EA) which would evaluate improvements that include:

1. Constructing a 20.5 acre-foot irrigation storage pond and pump station.
2. Constructing a 22 acre-foot flood control detention basin.
3. Constructing public recreation facilities.
4. Constructing flood control and irrigation piping.

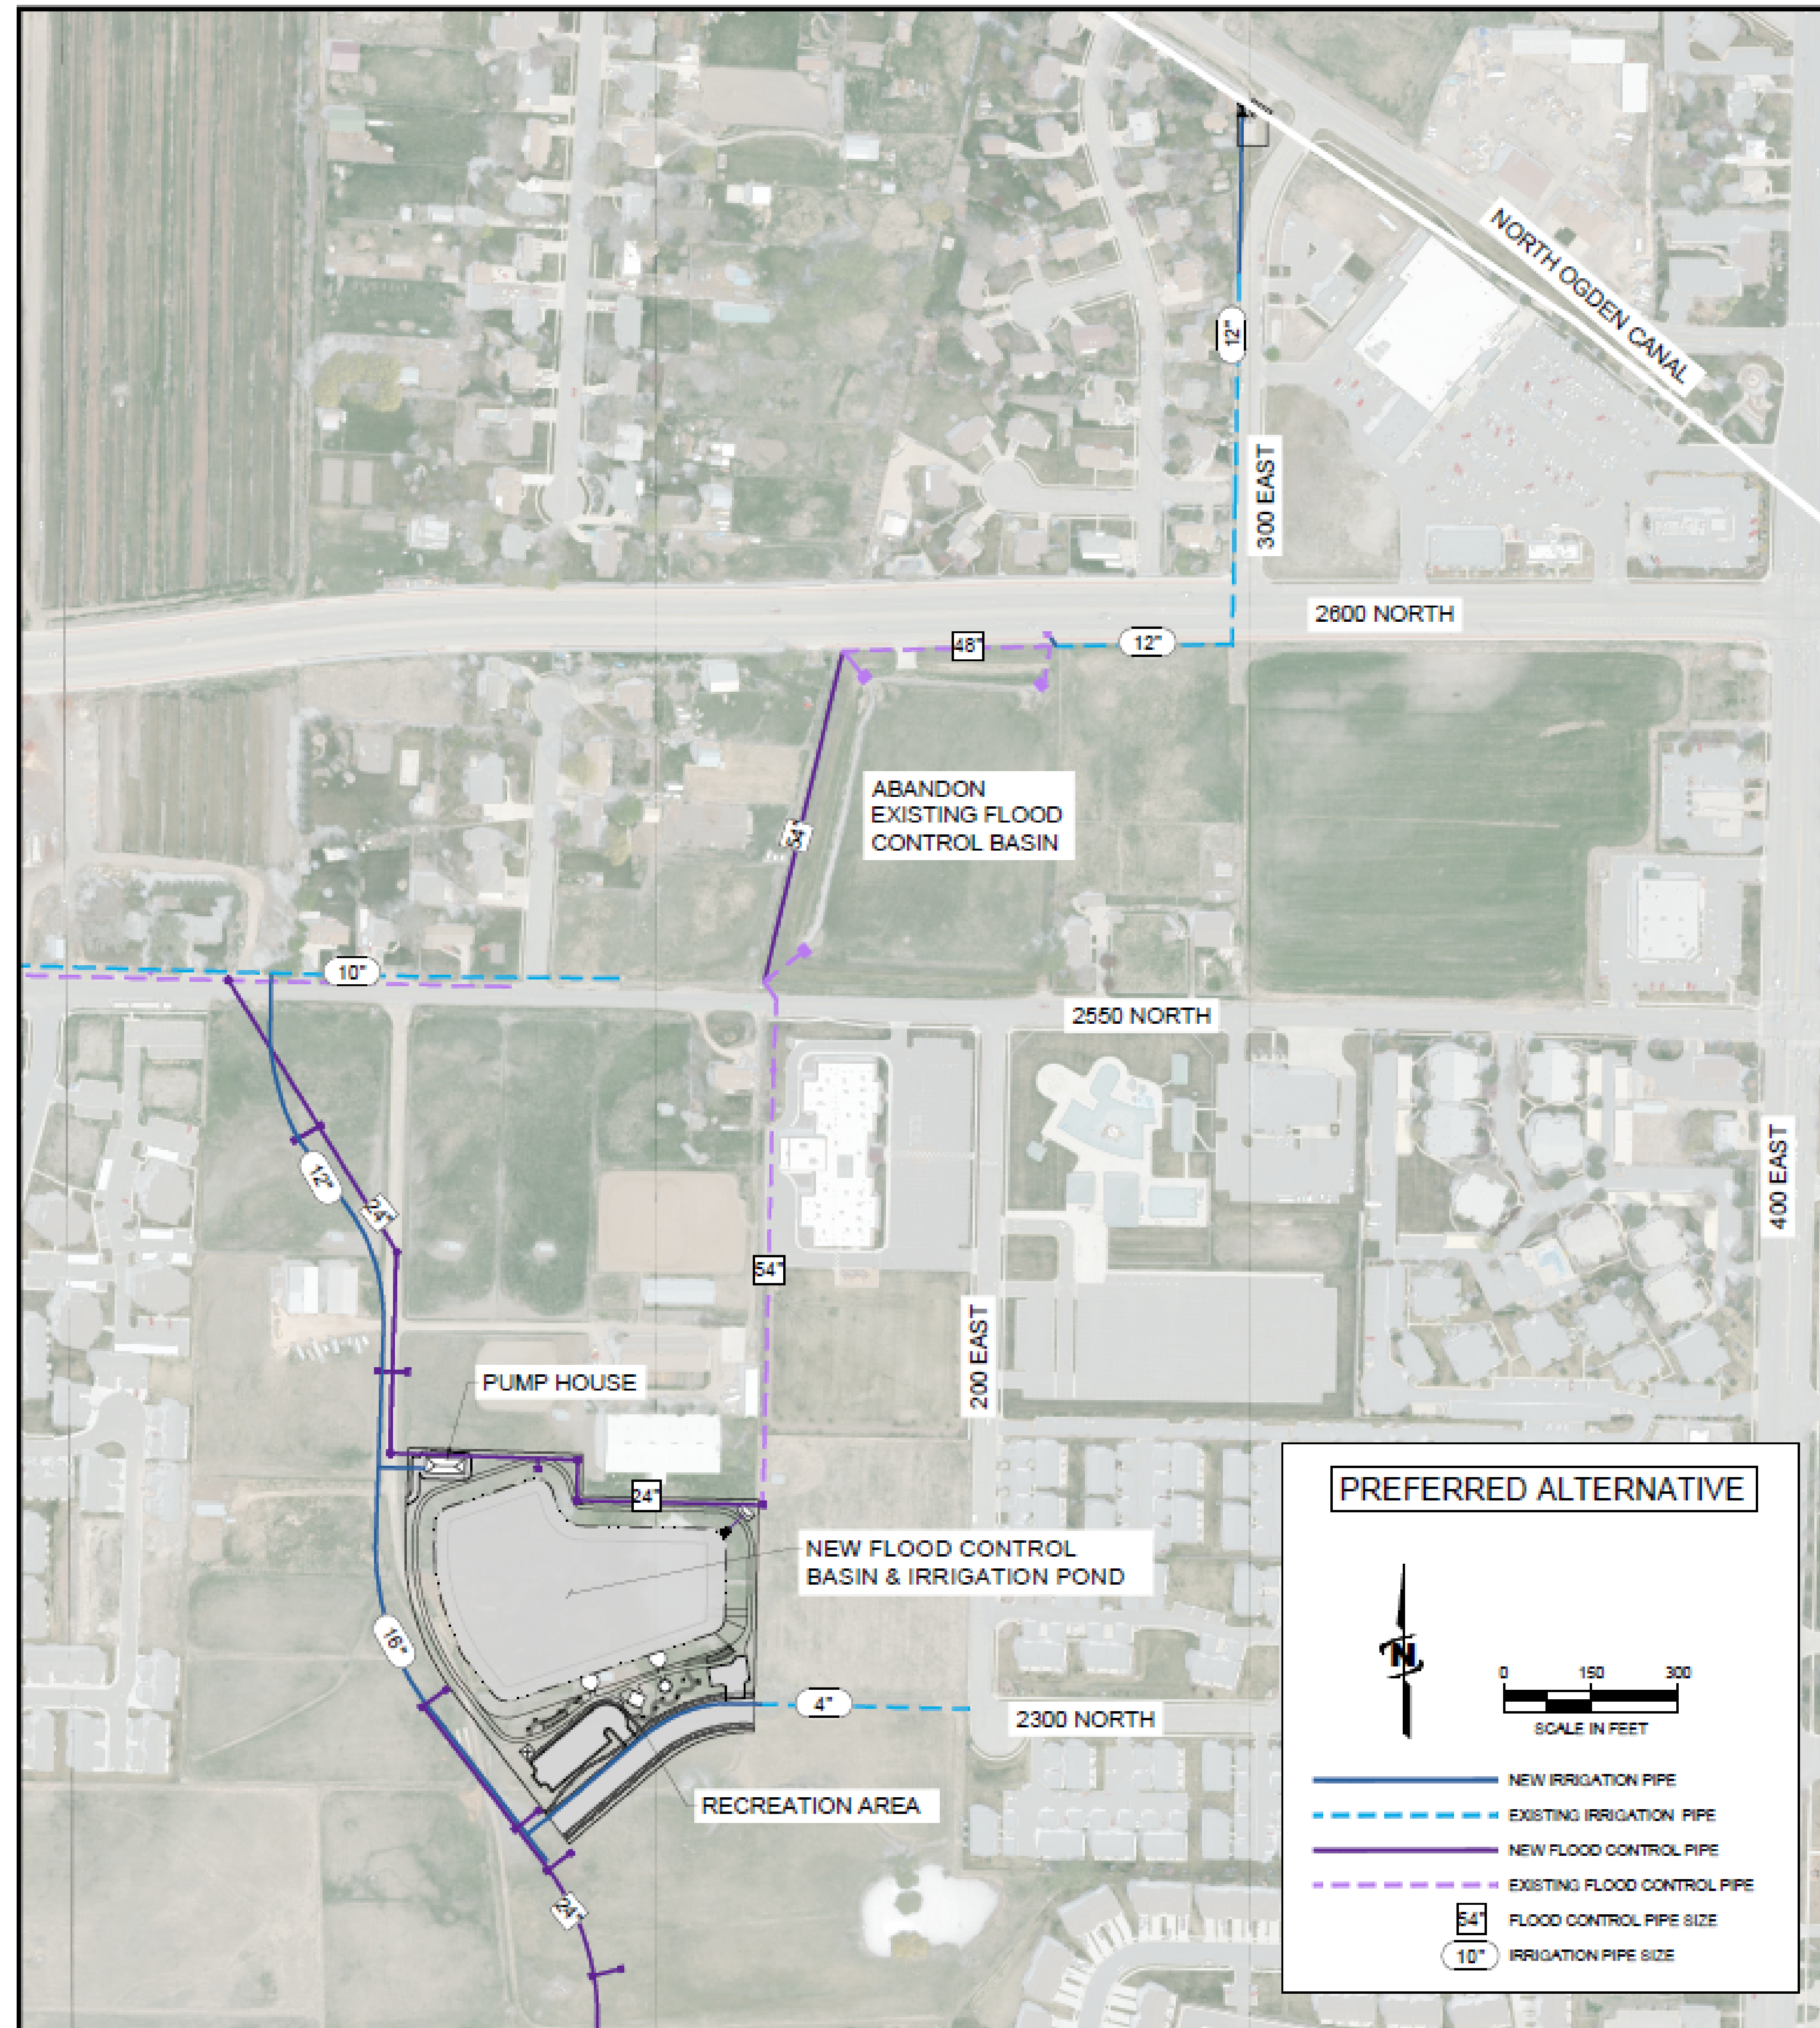

Project measures under consideration address flood protection, agricultural water management, and public recreation development.
